

User manual txt

Login page

User will enter Their username and password

If the Username or Password is entered containing a SQL term the user will be warned about attempting to hack the system and will be blocked from logging in.

The user will be blocked from logging in if the username or password field is empty.

If the user presses the submit button the app will connect to the Server which will check for a user with the same username and password:

If a user is found the current user will be logged in and will be taken to the Contact List page.

If a user is not found the app will tell the user to check their details and try to login again.

Closing this page will close the application

Contact List

The "Log out!" button will contact the server to log the user out and will return the user to the login page

The "Archive" button will take the user to the archive page

Pressing on a name on the contact list will open a chat window

Closing this page will close this page as well as any open chat windows, it will also log the user out and reopen the login page

Chat Window

The user will be able to write what they want in the text box and pressing the send button will send the text to the server which will then archive it and send it back to the receiving account

Any messages send and received will be viewable on the chat window until it is closed

Multiple chat windows can be open at any time

Closing one will not close the other chat windows

Archive View

User can select a User to view past conversations that they had with them in the past

The user will be able to specify dates that they want to check conversations from
